LAB 7: FUZZ TESTING

Movie ticket input validation | Hypothesis evidence

Adapted to the three pricing functions supplied in Lab 6.

Before hardening: fuzz style probes

```
PS> python / lab evidence transcript

ticket_price wrong type: TypeError: '<' not supported between instances of 'NoneType' and 'int'
ticket_price negative age: 0
group_discount wrong type: TypeError: '<' not supported between instances of 'str' and 'int'
snack_combo wrong type: 250
snack_combo unknown size silently accepted: 250
```

Hardened processor.py

```
PS> python / lab evidence transcript

Ticket price: 150
Group discount: 15
Snack combo: 130
```

Hypothesis test_processor.py

```
PS> python / lab evidence transcript

...............                                                  [100%]
15 passed in 1.31s
```
